

To Whom it May Concern,

I write to ask you to please take action to investigate the impact of communications towers, such as those that support TV and radio stations and cell phone service, on migratory birds. This concerns docket # 03-187

I write to request that the FCC should:

- 1) begin a systematic review of communication tower and bird mortality issues;
- 2) institute a research program, funded by the communications industry, to identify tower placement, design and lighting conditions that result in bird mortality;
- 3) undertake environmental reviews of all existing towers to assess their placement and design with regard to migratory bird impacts;
- 4) require that all proposed towers be subjected to rigorous environmental reviews;
- 5) and implement immediate protections based on existing knowledge, such as the voluntary tower siting and placement guidelines developed by the U.S. Fish and Wildlife Service

I understand that many songbirds migrate at night and are killed after colliding with these towers, particularly during periods of fog, rain and low-cloud ceilings. Tower height, placement, lighting and the presence and placement of wires seem to influence mortality levels, but a great deal still remains unknown about the impact of tower strikes on each bird species.

Thank you for your time,
Julie Atwell
